Period for Reply		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.		
<ul style="list-style-type: none"> - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 rejected under 35 U.S.C. 103(a) as being unpatentable over Zhang (6,855,954) in view of Lee (6,482,721).

Regarding Claims 1-4, Zhang discloses a thin film transistor and liquid crystal display having the thin film transistor where in Fig. 1C it is disclosed a gate 4 disposed on the substrate, a gate dielectric layer 6 disposed on the gate, a pattern semiconductor layer 8, a patterned, silicon dioxide or silicon oxide, insulating layers 10 and 11 and an ohmic layer (p or n type) 12 disposed on the silicon layer. Passivation layer 14 covers insulating layers 10 and 11. Zhang fails to disclose the required configuration where the central portion of the channel semiconductor layer is polysilicon and the side portions are amorphous. However, Lee discloses a method of manufacturing a polysilicon active layer in a thin film transistor where in Fig. 9, central portion of the channel semiconductor layer 160 is polysilicon and the side portions 113 are amorphous.

Regarding Claim 2, passivation layer is labeled as 14 in Zhang Fig. 1C

Regarding Claim 3, ohmic contact layer 12 of Zhang Fig. 1C is either n or p type

Regarding Claim 4, insulating layer 6, 10 and 11 are disclosed to be either silicon oxide or silicon nitride in Zhang as disclosed in column 1

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required polysilicon center portion and the amorphous side portions for the channel region in Zhang as taught by Lee in order to have a thin film transistor structure with increased reliability.
